

STACYVILLE WASTEWATER TREATMENT SYSTEM

This wastewater treatment system consists of a three-cell holding pond allowing a retention capacity of 180 days. The holding cells encompass a total water surface area of 15.7 acres and required approximately 21 acres of land.

This wastewater treatment system replaces the facilities constructed in 1936 and meets the requirements of the Iowa Department of Natural Resources. This project utilized CDBG and USDA-RD funding sources.

Yaggy Colby Associates provided engineering reports, facilities plans, sewer system evaluations, construction and grant administration.

Location:

Stacyville, IA

Services Provided:

- Engineering Reports
- Facilities Plans
- Sewer System Evaluations
- Construction Administration
- Grant Administration
